

PROFESSIONAL SUMMARY

AI and backend engineer with 7 years of combined experience across software delivery, backend and frontend web development, Unreal Engine systems, and digital products. Owns technical work from requirements and solution planning through implementation, API integration, testing, deployment, and production support. Builds maintainable services and automation workflows while using modern LLM tools and agentic methods to accelerate development, documentation, and QA.

PROFESSIONAL EXPERIENCE

Project Manager & Unreal Developer | Moshpit Studios

2022-Present

- Own backend and interactive product features from stakeholder requirements and technical planning through implementation, testing, deployment, and production support.
- Develop frontend and backend functionality, REST API integrations, plugins, and web-based multiplayer systems supporting Pixel Streaming and web-packaged experiences.
- Create and maintain reusable systems, investigate production issues, coordinate corrective fixes, and adapt functionality to evolving reliability and product requirements.
- Use Claude, ChatGPT, Cursor, prompt engineering, and MCP-based agentic workflows to accelerate prototyping, development, technical documentation, troubleshooting, and QA.
- Lead contributors across architecture discussions, technical priorities, dependencies, integration, validation, release readiness, and delivery progress.

Technical Project Coordinator | TectBrains.co

2020-2022

- Delivered web and application products across the SDLC, from technical requirements and specifications through API integration, UAT, release, and support.
- Translated business needs into use cases, user stories, acceptance criteria, technical documentation, and actionable implementation plans for engineering and QA.
- Supported REST APIs, vendor integrations, and SQL-backed requirements while coordinating clients, developers, QA, vendors, and support teams.
- Tracked defects, dependencies, schedules, and ownership in Jira; coordinated troubleshooting, validation, deployment readiness, and blocker resolution.
- Performed feature-impact and product-gap analysis to guide technical scope, prioritization, release decisions, and continuous improvement.

Game Artist | Sitara Games

2018-2019

- Translated early product concepts into UI, character, animation, and visual assets for 2D mobile games.
- Created wireframes and interactive prototypes to validate concepts, refine user flows, and support rapid iteration.
- Performed visual and UX quality reviews, gathered feedback, recommended improvements, and mentored design interns.

AI, BACKEND & CLOUD SKILLS

Backend Engineering: Python, Flask, Node.js, JavaScript, TypeScript, RESTful APIs, microservices, Celery, backend services, system integration, production support

AI & LLM Workflows: ChatGPT, Claude, Cursor, prompt engineering, LLM concepts, MCP-based agentic workflows, pgvector, n8n, Make.com, AI-assisted prototyping, troubleshooting, documentation, and QA

Data & Persistence: PostgreSQL, SQLAlchemy, Redis, pgvector, SQL and NoSQL databases, Firebase, data and API integration support

Cloud & DevOps: AWS, cloud environments, Docker, Kubernetes, containerization, orchestration, CI/CD, deployment practices, release validation

Engineering Quality & Leadership: TDD, testing, UAT, Agile/Scrum, SDLC, technical planning and specifications, Jira, reliability improvement, team delivery leadership, stakeholder collaboration

EDUCATION & CERTIFICATIONS

Bachelor in Software Engineering | CECOS University

2018-2022

Intermediate in Computer Science | PMDC College

2016-2018

Additional training: Google Digital Garage (2020) | Digital Marketing (2019) | Graphic Designing (2017) | Computer Programming (2016)
